10.2.10 Clear a Printer Jam in a Printer

A print job sent to a local printer stopped suddenly without producing a print. The printer display shows a “paper tray 2 jam” error that you must clear to resume printing.

Step 1: Remove Tray 2

Step 2: Check for Jammed Paper

Step 3: Open the Rear Duplexer Panel

Step 4: Clear the Jam

Step 5: Close the Rear Duplexer Panel

Step 6: Reinsert Tray 2

1. When presented with a “Paper Tray 2 Jam” error, what is your first step in resolving the issue? Pull tray 2 completely out of the printer
2. If jammed paper is present in the tray area, what is the best way to remove it to keep from tearing it? Pull the paper with both hands
3. If no jammed paper can be seen in the paper tray area, what is the next place to check? Rear duplexer
4. Once the paper jam has been cleared, what steps need to be taken before testing to make sure the issue is resolved? (Select all that apply.) Close the rear duplexer & Slide tray 2 back into the printer until fully seated
