Select and Configure Dual Monitors

A Marketing employee who creates and edits graphics, videos, and presentations has requested dual monitors to help them be more efficient and manage multiple creative applications simultaneously.

You have already placed a second monitor to the left of the computer. Use the items in the inventory to complete this task by doing the following:

- Select and install a *PCIe video card* that provides dual-monitor support using DVI and HDMI cables.
- Connect a **6-pin PCIe power supply connector** to the video card.
- Connect the original monitor to the new video card using the existing **DVI cable**.
- Connect the new monitor using an **HDMI cable**.
- Power on the computer and set the new monitor as the main display with the Start menu and taskbar.
- Select Identify, then drag the screens to reflect their physical placement.

Complete this lab as follows:

1. Select and install the video card.
 1. On the computer, select the **power button** to turn the computer off.
 2. Above the computer, select the change view icon, then select **Motherboard** to switch to the motherboard view of the computer.
 3. Under Inventory, expand **GPUs/Expansion Cards**.
 4. Drag the **Video Adapter, DVI-I, HDMI, Crossfire, PCIe** to the PCIe slot on the computer.
2. Connect the **6-pin PCIe power supply connector**.
 1. Select the **power supply**.
 2. From the Selected Item pane, drag the **Connector, Power Supply, 6-pin PCIe** power connector into the video card power slot.
3. Connect the original monitor to the new video card.
 1. Above the computer, select the change view icon, then select **Back**.
 2. On the computer, drag the **DVI connector** from the built-in video connector to the new video card in the computer.
4. Connect the new (left) monitor.
 1. Above the new monitor on the left, select the change view icon, then select **Back**.
 2. Under Inventory, expand **Cables**.
 3. Select the **HDMI to HDMI Cable**.
 4. From the Selected Item pane:
 - Drag an **HDMI Connector** to the new video card in the computer.
 - Drag the unconnected **HDMI Connector** to the HDMI port on the left monitor.
5. Set the new monitor as the main display with the Start menu and taskbar.
 1. Above the left monitor, select **Front** to switch to the front view.
 2. Above the computer, select **Front** to switch to the front view for the computer.
 3. On the computer, select the **power button**.
 4. Right-click the **desktop** and select **Display settings**.
 5. Maximize the window for better viewing.
 6. Under *Select and rearrange displays* at the top of the pane, select the monitor labeled **2**.
 7. Under Multiple displays, select **Make this my main display**.
 8. Notice that the taskbar is no longer visible.
6. Select **Identify**, then drag the screens to reflect their physical placement.
 1. Under *Select and rearrange displays*, select **Identify** to verify which screen you are on. The computer started on Monitor 1 (currently the right monitor)
 2. The monitor displays a large 1.
 3. The new monitor is on the left side. Drag the **2 box** to the left of the **1 box** to reflect their physical placement.
