

CompTIA A+ Core 1 Playbook

IT Labs

Prepared by Garrick White

Select Memory by Sight

You work at a computer repair store. You are building a computer using spare parts. You need to install the correct memory module for the computer.

In this lab, your task is to:

- Examine the motherboard memory slots and the memory modules available in the Inventory to find the correct memory.
If necessary, zoom in on the motherboard to get a better look at the memory slots.
- Install a single memory module in the motherboard.

In this lab, you are required to identify the memory in the Inventory by sight.

Complete this lab as follows:

1. Identify the type of memory slots available on the computer.
 1. Above the computer, select the Change View icon and then **Motherboard** to switch to the motherboard view.
 2. Zoom in to examine the memory slots for the motherboard.
 3. Identify the location of the notches in the memory slot.
2. Install the correct memory module.
 1. Under Inventory, expand **Memory**.
 2. Drag the **DDR4 RAM** from the Inventory to a memory slot on the motherboard.
