IT Labs

Prepared by Garrick White

Troubleshoot Memory

You are an IT helpdesk technician. Your company uses Issue Trax as its ticket management software.

To complete this lab, open Issue Trax on the ITAdmin computer. Read the open ticket and resolve the problem. Add a comment describing what actions you took, then close the ticket.

Note: The problem will be considered "resolved" when the Exec computer successfully boots into Windows with at least 8 GB of RAM installed.

Complete this lab as follows:

1. Check the ticket
 1. Open **Issue Trax** by searching for it from the Taskbar.
 2. Maximize the window for better viewing.
 3. Select the ticket.
 4. Carefully read the ticket description.
2. Remove the bad memory
 1. At the top-left corner of the screen, select **Floor 1**.
 2. Select the **Hardware** view in the Executive Office.
 3. Press the **power button**. Notice that the computer doesn't boot and starts beeping.
 4. Select **Executive Office** to go back to the hardware view.
 5. Press the **power button** on the computer to stop the infernal beeping.
 6. Switch to the **Motherboard** view of the computer.
 7. Check each RAM stick in the computer using the memory tester. Instructions are noted below.
 8. Remove the bad RAM stick.
3. *How to use the Memory Tester:*
 1. *In the inventory, expand **Tools**.*
 2. *Drag the **Memory Tester** to the workspace.*
 3. *Insert a RAM stick into the appropriate slot, then press the button on the tester.*
 4. *The screen will tell you if the memory is good or bad.*
 5. *Drag the RAM stick away to disconnect it.*
4. Add new RAM to the computer
 1. Expand **Memory** on the shelf.
 2. The computer will need four total 2GB RAM sticks to get to 8GB of memory.
 3. Using the **Memory Tester** to verify each RAM stick, place three new good modules into the slots on the motherboard.
5. Boot the computer
 1. Switch to the **Front** view of the computer.
 2. Press the **power button** to turn the computer on.
 3. If you've done it correctly, the OS will load.
6. Close the ticket
 1. Go back to the **ITAdmin** computer in the IT Administrative Office.
 2. Write a comment describing the fix you implemented, then press the **Plus icon**.
 3. At the top-right corner, select **Closed**.
