

CompTIA A+ Core 1 Playbook

IT Labs

Prepared by Garrick White

4.1.2 Find BIOS/UEFI Settings

You are the IT administrator for a small corporate network. The employee in Office 1 has mentioned several times that their computer seems to be slow. You have decided to explore the possibility of upgrading the computer by determining its current status.

In this lab, your task is to:

- Access the computer's BIOS/UEFI settings. Do this by restarting the computer, then pressing **F2** or **Del** before the OS loads.
- Answer the questions.

Complete this lab as follows:

1. Access the computer's BIOS settings.
 1. Select **Start**, then the **Power** button, then **Restart**.
 2. When the *Restarting* text goes away, and you see a black screen, press **F2** on your keyboard.
2. Determine the computer's BIOS version, total memory installed, CPU brand, and the number of drives.
 1. From the left pane, expand and select **General > System Information**.
 2. From the right pane, examine the information shown.
 3. From the top right, select **Questions**.
 4. Answer Questions 1-4.
 5. Minimize the Lab Questions window.
3. Determine the status of the integrated NIC and the USB controller.
 1. From the left pane, expand and select **System Configuration > Integrated NIC**.
 2. Answer Question 5.
 3. From the left pane, select **USB Configuration**.

Lab Questions

Q1 What is the BIOS version number? 1610

Q2 How much memory is installed in the computer? 16384 MB

Q3 Who is the manufacturer of the installed processor? Intel

Q4 How many hard drives are installed? 3

Q5 What is the status of the integrated NIC? Enabled

Q6 What is the current status of the USB 3.0 controller? Enabled
