IT Labs

Prepared by Garrick White

4.2.2 Troubleshoot System Power

As an IT Administrator at a mid-sized company, your role includes monitoring and managing the Issue Trax help desk system to ensure timely resolution of reported problems.

Each ticket will include the information to determine which device is affected and the issue that needs to be resolved.

A new ticket just arrived. Do the following:

- Assign the ticket to you.
- Read and determine the device and problem.
- Examine the hardware and resolve any issues.
- Add a comment to and close the ticket.

Complete this lab as follows:

1. Access the open ticket and assign it to yourself.
 1. Select the **Start** icon.
 2. Select the **Issue Trax** icon.
 3. Maximize the window for better viewing.
 4. Select ticket **#15**.
 5. Under Assignee, select **me** from the drop-down list.
 6. In the comment, notice it is the computer in the *Support* office.
 7. Leave the ticket maximized to update it later.
2. It is always good to verify the issue. Test to see whether the Support computer will power on.
 1. From the upper left, select **Floor 1 Overview**.
 2. Under *Support Office*, select **Hardware**.
 3. On the Support computer, select the **power button**.
 4. A message tells you that the computer failed to turn on.
 5. Select **OK**.
3. Provide power to the computer.
 1. Switch to the Back view of the computer.
 2. Select the **AC Power Cable** that is plugged into the power supply.
 3. From the right, select the plug labeled **Connector, Power, AC, Male** shown as not connected, and plug it into the power strip.
 4. Switch to the Front view of the computer.
 5. On the computer, select the **power button** to see if the issue is fixed.
 6. A message tells you that the computer did not come on.
 7. Select **OK**.
4. Configure the computer to use 115 volts.
 1. Above the computer, select **Back** to switch to the back view of the computer.
 2. Switch the power supply voltage to **115V**.
 3. Above the computer, select **Front** to switch to the front view of the computer.
 4. On the computer, select the **power button** to see if the issue is fixed.
 5. A message tells you that the computer did not come on.
 6. Select **OK**.
5. Flip the power supply switch to the on position.
 1. Above the computer, select **Back** to switch to the back view of the computer.
 2. Turn the power supply switch to **On**.
 3. Above the computer, select **Front** to switch to the front view of the computer.
 4. On the computer, select the **power button**.
 5. Now that the proper power is being supplied, the computer boots to the operating system.
6. Add a comment to the ticket and close the ticket.
 1. Leave the computer at the OS screen.

2. From the upper left, select **Floor 1 Overview**.
3. Under *IT Administration*, select **ITAdmin**.
4. In the *New Comment* field, enter a comment to indicate that the computer is now working.
5. Select the **+** (plus sign) to add the comment.
6. From the top of the ticket, select **Closed**.
