IT Labs

Prepared by Garrick White

5.4.13 Secure a Small Wireless Network

In this scenario, you've installed a new router in your home office. You've already connected your desktop computer (Home-PC) to the router with an Ethernet cable. Your next step is to set up the wireless network so you can connect your laptop (Home-Laptop) over Wi-Fi.

To configure the wireless access point, use Chrome on Home-PC.

- Address: **192.168.0.254**
- Username: **admin**
- Password: **password**

If this were a real network, you would change those right away, but that's not part of this lab.

Perform the following tasks:

- Give the network an SSID (network name):
 - The SSID can be changed on the **Basic Settings** subtab of the **Wireless** tab.
 - Add the SSID **Pretty Fly Wi-Fi** to the 2.4GHz interface.
 - Before you leave this page, scroll to the bottom and click **Apply Settings** to save your work.
- Add encryption and a password to the wireless network:
 - The encryption and password can be configured on the **Wireless Security** subtab of the **Wireless** tab.
 - Use **WPA2-PSK** encryption.
 - Set **H@rd2Guess** as the shared key (password).
 - Before you leave this page, scroll to the bottom and click **Apply Settings** to save your work.

- Return to the Computer Desk and connect the laptop to the wireless network you just configured.

Complete this lab as follows:

1. Access the router settings:
 1. Click the screen of **Home-PC** to access the operating system.
 2. From the taskbar, open **Chrome**.
 3. In the URL field, type **192.168.0.254** and press **Enter**.
 4. In the Username field, enter **admin**.
 5. In the Password field, enter **password**.
 6. Select **OK**.
2. Give the wireless network an SSID:
 1. Select the **Wireless** tab and then select the **Basic** subtab.
 2. Type **Pretty Fly Wi-Fi** into the Wireless Network Name (SSID) field.
 3. Scroll to the bottom of the screen and select **Apply**. **Do not forget this step!**
3. Configure security settings for the network:
 1. Log in to the Wireless Router again with the above credentials.
 2. Select the **Wireless** tab and then select the **Security** subtab.
 3. Open the Security Mode dropdown and select **WPA2-PSK**.
 4. Type **H@rd2Guess** into the WPA Pass Phrase field.
 5. Scroll to the bottom of the screen and select **Apply**. **Do not forget this step!**
4. Configure the Home-Laptop to connect to the wireless network and save the wireless profile as follows:
 1. At the top of the screen above the Chrome window, select **Computer Desk**.
 2. Select the monitor of the Home-Laptop to access the operating system.
 3. In the notification area, select the **Network** icon.
 4. Select the arrow next to the Wi-Fi symbol.
 5. With the Pretty Fly Wi-Fi network selected, select **Connect**.
 6. Enter **H@rd2Guess** into the security key field.
 7. Select **Next**.
