IT Labs

Prepared by Garrick White

7.2.2 Use a Proxy Server

You are the IT administrator for a small corporate network. You need to configure the Marketing6 computer to use the corporate proxy server. The proxy server is used to control access to the internet.

In this lab, your task is to:

- Configure the proxy server settings.
 - Proxy IP address: **proxy.corpnet.local**
 - Port: **9000**

To access proxy settings in the Settings app, go to **Network & Internet**, then select **Proxy**.

Explanation

Complete this lab as follows:

1. Access the proxy settings.
 1. Right-click **Start** and then select **Settings**.
 2. Select **Network & Internet**.
 3. From the left pane, scroll down and select **Proxy**.
 4. Maximize the window for better viewing.
2. Configure a manual proxy.
 1. Under *Manual proxy setup*, slide the *Use a proxy server* button to **ON**.
 2. In the Proxy IP Address field, enter **proxy.corpnet.local** for the IP address.
 3. In the *Port* field, enter **9000** as the port number.
 4. Select **Save**.
 5. Close the Settings app.
