8.2.6 Manage IaaS Virtual Machines in Azure That Run Windows Server

You are the network administrator for your company. You have decided to begin the configuration of Azure to help manage your network. As part of this setup, you need to create a virtual server in Azure.

In this lab, your task is to create an Azure virtual machine using the following information:

- Virtual machine type: **Azure virtual machine**
- Project details:
 - Subscription name: **CorpNet Production**
 - Resource group name: **CorpNetCloud**
- Instance details:
 - Virtual machine name: **CorpCloud1**
 - Region: **(US) West US2**
 - Image: **Windows Server 2022 Datacenter: Azure Edition - Gen2**
 - Size: **Standard_D4s_v3 - 4 vcpu, 16 GiB memory (\$327.04/month)**
- Administrator account:
 - Username: **CorpAdmin**
 - Password: **corpP@ssw0rd**
- Disk options:
 - Set **Standard HDD** as the OS disk type.
 - Make sure that the *Delete with VM* box is selected.
- Use the default network parameters.

To create a new virtual machine in Azure:

1. Maximize the Chrome window for better viewing.

2. Under Azure Services, select **Virtual machines**.
3. Select **Create**, then **Azure Virtual Machine**.

Complete this lab as follows:

1. Configure the virtual machine's basic settings.
 1. Maximize the Google Chrome window for better viewing.
 2. Under Azure Services, select **Virtual machines**.
 3. From the menu bar, select **Create > Azure virtual machine**.
 4. Under Project details, configure the following:
 - Subscription: **CorpNet Production**
 - Resource group: **CorpNetCloud**
 5. Under Instance details, configure the following:
 - Virtual machine name: **CorpCloud1**
 - Region: **(US) West US2**
 - Image: **Windows Server 2022 Datacenter: Azure Edition - Gen2**
 - Size: **Standard_D4s_v3 - 4 vcpu, 16 GiB memory (\$327.04/month)**
 6. Under Administrator account, configure the following:
 - Username: **CorpAdmin**
 - Password: **corpP@ssw0rd**
 - Confirm password: **corpP@ssw0rd**
2. Configure the disks for the new virtual machine.
 1. From the bottom menu bar, select **Next: Disks**.
 2. Under Disk options, configure the following:
 - OS disk type: **Standard HDD**
 - Delete with VM: Make sure that this box is selected.
3. Configure the network connectivity for your virtual machine.
 1. From the bottom menu bar, select **Next: Networking**.
 2. Under Network Interface, verify the following settings:
 - Virtual network: **(new) CorpNetCloud-vnet**
 - Subnet: **(new) default (10.0.0.0)/24**
 - Public IP: **(new) CorpCloud1-ip**
4. Review and validate the new virtual machine.
 1. From the bottom menu bar, select **Review + create**.
 2. Review the virtual machine details.

5. Create the virtual machine.
 1. From the bottom menu bar, select **Create**.
 2. Monitor the creation process until the deployment is complete.
 3. After the deployment is complete, select **Go to resource** and verify that the machine has been created.
